

FIX IT is an innovative, multifunctional mobile application designed to address two primary challenges faced by students: finding affordable and safe accommodations (PGs) and accessing valuable educational resources. This platform simplifies the process of searching for PG accommodations by allowing students to filter results based on location, price, amenities, and proximity to colleges. Students can browse listings, view detailed descriptions and reviews, and directly communicate with landlords, ensuring they find housing that meets their needs. Additionally, FIX IT partners with trusted accommodation providers, offering discounts and exclusive deals, making housing more affordable. The app also supports booking directly through the platform and provides assistance with moving logistics. Beyond housing, FIX IT

enhances students' educational experiences by offering a range of resources including textbooks, e-books, and reference materials, available for purchase or rental. It also integrates online tutoring services, where students can connect with qualified tutors for one-on-one sessions in various subjects, and provides exam preparation materials like study guides and practice tests. To further support academic success, FIX IT features forums and communities where students can collaborate, share resources, and discuss academic topics with peers. In terms of monetization, FIX IT generates revenue through commissions on PG bookings, subscription models for premium educational content, and partnerships with universities, coaching centers, and other educational institutions for exclusive discounts and services.

Overall, FIX IT provides a comprehensive solution for students, combining both housing and educational needs into one platform, ensuring their academic and living experiences are streamlined, stress-free, and successful.
